

Root cutter

The Ilmer root cutter allows you to influence and regulate the growth of orchards according to your needs, thanks to selective cutting. This is made possible by a special blade, which can be adjusted during its movement in both the angle and the depth of penetration, therefore preventing damaging the trees. The particularly compact constructive system allows you to work comfortably and precisely even in narrow spaces and is driven in an optimal way by the large wheel carrier, so as to remove the load from the tug.

TECHNICAL DATA

External dimensions	410x188 cm	Angle of inclination	+24° to +70°
Structural height	118 cm	Weight	220 kg
depth of penetration	82 cm		

The technical data refers to the basic machine without accessories.
All data is approximate and non-binding.
